

## Welcome back

The summer is coming to an end, and we have returned to our daily routines after a few weeks of holiday. We hope that you also have had the chance to have a break and enjoy the summer this year.

In recent weeks, the borders have become more open. We have had our first foreign visitor at the TestPig station after the lockdown. We also hope to see you in the nearest future so you can experience the TestPig facilities in real life.

However, some challenges persist. Zinc Oxide and gut health just to mention a few. No single solution has been detected yet. A combination of different feed additives, highly digestible nutrients and proper management seem to make an exciting cocktail. Right now, experiments at our Test station and at some local farms support this conclusion (SR Elite weaning diet). This set up is a new and unconventional cooperation between local pig producers, advisors from The Danish Pig Advisory Center and TestPig.

June 2022 and the ban on use of medical doses of Zinc oxide is approaching, urging for new products and new combinations of solutions. Maybe your product(s), our advisory expertise and TestPig together will make a great leap forward? Join us in the fight for better gut health.

Please contact us for more information about SR Elite weaning diet.

Kind regards,

The TestPig Team
